

Endologix educational workshop:

Anatomical fixation for Endovascular Aortic Aneurysm Repair/Sealing

Nieuwegein, The Netherlands
Dept. Vasc Surg and Int Rad

Programme director:
Dr Jean Paul de Vries

Course Objectives

The purpose of this education program is to facilitate the discussion on Aortic aneurysm management with a special focus on endovascular approaches. Discussion will include review of the different techniques and tools for specific cases, with a special focus on AFX and/or Nellix.

Educational Objectives

- Understand technical challenges of Aortic aneurysm repair/sealing
- Understand how anatomical fixation offers an alternative to challenging patient cases

Educational Methods

- Live operative case observation (2 procedures minimum) and pre-operative planning and sizing of participants future cases
- Didactic lectures and discussion with question and answer sessions
- Hands-on facilities

Travel and Accommodation

Endologix will coordinate all of your travel and accommodations. All travel will be in accordance with the Eucomed/Advamed Code of Ethics

This programme is limited to healthcare professionals only who have a bonafide professional interest in the presentation topic.

Program Details

Day 1

- 17.00 – 17.30 - Company and product overview
- 17.30 – 18.30 - Pre-operative planning of the planned live cases
- New results of AFX/Nellix
- 18.30 – 19.00 - AFX/Nellix principles and deployment, including hands-on in the angiosuite
- 19.00 - Departure for dinner

Day 2

- 8.00 - Departure for hospital
- 8.30 – 13.00 - 2 to 3 AFX and/or Nellix cases
- Review patient case (brought by participants)
- 13.00 – 14.00 - Question and answer session operative planning/sizing

Location

St Antonius Hospital
Koekoekslaan 1
3435 CM - Nieuwegein
The Netherlands

Hotel Details

Mercure Utrecht Nieuwegein
Buizerdlaan 10
3435 SB - Nieuwegein
The Netherlands

Course Faculty

Dr Jean Paul De Vries, MD

From August 2003 he is the programme director of Vascular Surgery of the St. Antonius Hospital Nieuwegein, a tertiary vascular referral centre, in the Netherlands.

Dr. R.H.W. van de Mortel, and dr. J. Wille, vascular surgeons.

Dr. D.A.F. van den Heuvel, Dr. M. van Leersum, and Dr. J.A. Vos, interventional radiologists.

The departments of Vascular Surgery and Interventional Radiology are in the frontiers of new developments in EVAR (European training centre and international proctors for EVAR) and minimal invasive interventions for peripheral arterial disease (European training centre for remote endarterectomy of the SFA). More than 1600 EVAR procedures have been performed during last decennia and every year approximately 100 elective EVAR cases are done at the brand new hybrid OR. Dedicated imaging modalities like 3D over layer technique can be performed in this sophisticated environment.

The team of vascular surgeons and interventional radiologists will be happy to welcome you for this two days workshop and like to share their robust experience with you.
